Methodology: MVC, OOP, RESTful Routing

Professional Experience

Plain Concepts – Redmond, WA

Web Developer

Sep 2018 – Current

- Works with designers and project managers to create websites and applications that meet the criteria of the client
- Frequently uses different technologies for different projects depending on use case on a weekly-basis
- Implements modules and components that add functionality and better user experience for pre-existing projects
- Improves optimization and performance of projects by caching assets and data
- Maintains web jobs and integrate web services in older projects to guarantee that they are in working order
- Follows requirements and guidelines to ensure web accessibility for projects in production

Athlete Intelligence by i1Biometrics – Kirkland, WA

Software Engineer

April 2017 – May 2018

- Built out internal and consumer facing features on the web platform in Angular and C#
 - Implemented and designed the user interface and user experience of the web and mobile application
 - Maintained and supported the current customer facing marketing website
 - Migrated company's website from an external CMS system, WordPress, and brought it in-house
 - Executed test cases to ensure production requirements are achieved to meet consumer expectations
-

Projects

Marvel Character Catalog – *Full Stack Angular Web Application*

- Produced an application to showcase the Marvel API. Users can browse a character list and navigate into a character detail page where users can comment and the data persists in a cache. Focuses on Angular, Express, and Redis.

OW Sens – *Front-End Angular Project*

- Created a web application to help calculate and find the proper sensitivity for gamers who play Overwatch. Focuses on the use of components and the passing of data using Angular and Bootstrap

PotLuck – *Full Stack Python Web Application*

- Developed an application for people to share recipes. Users are able to post, favorite, create instruction for their own signature dishes. Focuses on the use of Python, Django, and a SQLite database.
-

Education

Coding Dojo – Bellevue, WA
